

Software as a Service

PROCAS Software as a Service, a Hosted Solution

PROCAS Accounting, PROCAS Time and PROCAS Expense are hosted on our fast, reliable and secure servers. Users can access the software from their computer wherever internet access is available. The processing is performed on our servers, requiring minimal customer hardware resources.

Server hardware and PROCAS software are provided, backed up and maintained by PROCAS. Customers are not required to purchase and maintain servers for the software as a service nor do they need to purchase software licenses. The hosted service is available for as little as \$295.00 per month* with access via the internet. †

Performance, Reliability and Security

Two Quad Core 3.16GHz Processors

Servers are equipped with a minimum of two quad core Intel® Xeon™ processors running at 3.16GHz with 6MB Cache, and 1333MHz FSB. These processors provide outstanding computing power.

32GB 667MHz RAM

Servers are equipped with a minimum of 32GB 667MHz memory. Plenty of fast, reliable memory is available for the applications.

RAID 10 Hard Drive Configuration

Eight 15,000-RPM SAS, hot-swappable hard drives are setup in a RAID 10 configuration. This configuration provides outstanding data access speed, and if a hard drive fails, it can be replaced without data loss or interruption of service.

Redundant Power Supplies

Redundant, hot-swappable power supplies power each server. If one power supply fails, it can be replaced without data loss or interruption of service.

UPS Protection

Battery-powered, uninterruptable power supplies protect the server in the event of power failures.

Emergency Power Generators

Emergency power generators power the system in the event of prolonged power failures.

Daily Backups

Tape backups of all the data on the servers are performed daily and moved off site once per week.

Data Security

Connections to the server are protected with 128-bit encryption; the operating system and application software are password protected, and data is encrypted.

Physical Security

The data center is not open to the public. Access is restricted to authorized personnel and monitored by video-surveillance systems.

Redundant High-Speed Internet Connection

The data center is connected to the internet via a fiber optic network with multiple private OC-192 SONET rings with transmission speeds of up to 10G per connection.

How it Works

PROCAS software runs on our servers under the Microsoft® Windows Server® 2008 R2 operating system and Remote Desktop Connection software. Users log onto our server with Remote Desktop Connection client software through an internet connection. Thin-client technology allows the user to send keyboard and mouse commands and receive real-time screen updates. Printing is executed on the local printer. PROCAS software appears to be running on the local computer.

*The starting price of \$295.00 per month includes access for one simultaneous accounting user, five timekeeping users and five expense reporting users. Price also includes the use of PROCAS software, hardware, minor updates, major upgrades, e-mail and telephone technical support. Price does not include a one-time setup fee of \$400.00 and the cost of implementation, training and consulting. Pricing is subject to change.

† User is responsible for providing client workstations, printers and connections to the internet from the client workstations.
