

Software as a Service

www.PROCAS.com

Secure, Reliable and Cost Efficient

Secure

Data is protected with encrypted connections to our servers. PROCAS application access is password protected. The data centers where our equipment is located are closed to the public. Access is restricted to authorized personnel and monitored by video-surveillance systems.

Reliable

Each of our data centers are capable of supporting all of our clients' processing needs. There is continuous replication of data between the data centers across a dedicated communication link. In addition to data center redundancy, there are also server, network and power redundancies at each data center to avoid single points of failure. PROCAS performs regularly scheduled migration of the primary production workload from one data center to the other to ensure our technologies and processes are operating as designed.

Cost Efficient

Just as our accounting software is supported by industry specialists, our infrastructure is supported by experienced IT professionals. Our Software as a Service (SaaS) model allows our clients to leverage PROCAS infrastructure and IT staffing resources, freeing them to invest more into growing their business.
